

## Grupo 5:

Formação de palavras em inglês:  
diferentes afixos.

## PREFIXO

- O prefixo é a parte que **vem antes** da palavra em si. No inglês existem diversos deles, alguns com um significado particular e outros com um significado compartilhado.

**Anti-: contra**

**antivirus** - antivírus  
**antibiotic** - antibiótico  
**antidote** - antídoto

**de-: oposto de**

**deactivation** - desativação  
**decaffeinated** - descafeinado  
**desalinize** - dessalinizar

**ex-: passado, antigo, anterior**

**ex-boyfriend** - ex-namorado  
**ex-husband** - ex-marido  
**ex-wife** - ex-esposa

## SUFIXO

- O sufixo é a parte que **vem depois** do meio da palavra. Da mesma forma que nos prefixos, alguns compartilham significado e outros adicionam um significado próprio.

### -ly: **forma advérbios**

hardly - dificilmente  
quickly - rapidamente  
certainly - certamente

### -ful: **algo que se destaca por sua grande quantidade.**

painful - doloroso  
colorful - colorido  
powerful - poderoso

### -less: **falta**

painless - sem dor  
colorless - sem cor  
powerless - sem poder

## Apple's new AirPods have Siri built-in

(Os novos AirPods da Apple têm o Siri incorporado)

# Apple's new AirPods have Siri built-in

© 20 March 2019

**Apple has launched a new version of its wireless earphones that allows users to activate the virtual assistant Siri by voice alone.**

It means that the assistant can now be reached without any buttons having to be pressed - users just utter the familiar command, "Hey Siri".

Apple also said that the AirPods had an additional hour of talk time thanks to improved battery life.

One analyst said it was a sign that AirPods were "getting smarter".

The AirPods also feature a new chip, H1, which Apple says improves the wireless connection between the earphones and the user's smartphone, watch or tablet.

"Switching between devices while listening to music on iPhone, Apple Watch or iPad is more seamless than ever with two times faster connect times," said Apple.

The new AirPods will cost \$159 (£159) while the version with the wireless charging case will cost an extra \$40.

"Apple AirPods are getting smarter," said Neil Mawston at Strategy Analytics."

"Apple is trying to accessorise smartphones and grow its whole mobile pie."

"If Apple can sell [a] million more AirPods this year, then it can offset some of the recent declines in iPhone."
